

AI Red Flag Detector: Job Analysis Report

60 Days of AI Challenge • Day 14

Job Title	AI/ML & Data Scraping Intern
Company	Venture Builders
Location	Remote (India)
Stipend	Rs. 3,500 - 4,000 per month
Duration	2 months
Source	Indeed

78 / 100

Overall Risk Score
HIGH RISK

Top Red Flags

#	Red Flag	Severity
1	Title-role mismatch: advertised as "AI/ML Intern" but core work is scraping, cleaning, and manual data extraction	8/10
2	"Remote" listing contradicted by a requirement of willingness to work in an in-office environment	9/10
3	Extremely low stipend (about USD 40-48 per month) for a 2-month internship	8/10
4	Skill-list bloat: Python, Java, HTML/CSS, BeautifulSoup, Selenium, Scrapy, Pandas, NumPy for an entry-level scraping role	6/10
5	No verifiable company presence: no address, CEO, description, or sector info on the Indeed company page	7/10
6	Thin reputation data: only 2 "recommend a friend" responses and no rating history	6/10
7	Vague eligibility (students, freshers, or anyone with relevant experience) suggests high-volume, low-selectivity hiring	4/10

Positive Signals

- Duration is clearly stated (2 months), with no open-ended ambiguity
- Stipend is disclosed upfront, unlike many listings that hide compensation
- Responsibilities are concrete (scraping, cleaning, structuring data) rather than vague buzzwords
- Lists tangible benefits: flexible schedule and paid time off

Risk Breakdown

Category	Risk Level
Requirements	Medium

Category	Risk Level
Culture	Medium-High
Remote	High
Hiring	Medium
Company	High

FINAL VERDICT: APPLY WITH CAUTION

This looks like a legitimate but low-value gig. Real scraping and data work exists, but it is marketed as "AI/ML" to attract applicants, pays token compensation, and has an unresolved remote vs in-office contradiction. Reasonable as a resume filler or first-project exposure if there are no other offers, but expect minimal real ML exposure and verify the in-office claim before committing.

5 Smart Interview Questions

1. The listing mentions both "remote" and "in-office environment". Can you clarify exactly where and how often I would need to be physically present?
2. Could you walk me through a typical week? How much time would actually involve ML/AI work versus scraping and cleaning?
3. Is there a mentor or engineer I would be working under, and will I get code review or technical feedback on my scraping pipelines?
4. Given the Rs. 4,000 per month stipend, is there a path to a paid full-time or extended role after these 2 months, or is this a fixed-term arrangement?
5. Could you share company registration details or a public project Venture Builders has shipped, so I can understand what the organization actually builds?
