

MISBAH FAYAZ

Srinagar, Jammu & Kashmir | misbafayaz8@gmail.com | LinkedIn | GitHub: Misbah361/60-day-claude-challenge

PROFESSIONAL SUMMARY

B.Tech student in Artificial Intelligence & Data Science with hands-on experience in Python-based simulation engineering, data modeling, and applied AI tooling. Built and tested modular simulation systems processing real-time computational data, and actively developing AI/LLM fluency through a self-driven 60-day applied learning challenge. Seeking to apply strong analytical foundations and Python proficiency to AI/ML research and engineering problems.

SKILLS

Python, SQL, NumPy, Data Structures & Algorithms (Fundamentals), Prompt Engineering, Data Analysis & Modeling, Flask (Basics), Git/GitHub, Claude AI & AI Tooling, Matplotlib (Data Visualization)

PROJECTS

Circuit.IQ — Physics Simulation Engineer | Semester Project

- Built a Python/NumPy-based simulation engine for a browser-based virtual lab, processing structured numerical data through custom-built computational models
- Developed and validated circuit-solving algorithms using Modified Nodal Analysis (MNA), including KVL/KCL verification and power calculations — core skills in numerical modeling and algorithm design transferable to ML feature engineering
- Built and tested 15+ simulation modules, generating result visualizations using Matplotlib for data interpretation and validation
- Designed a Flask API layer to expose simulation outputs, demonstrating experience translating model logic into deployable software components
- Collaborated in a 5-member cross-functional team (frontend, backend, AI integration, QA), coordinating across technical disciplines to deliver an integrated full-stack application

60 Days of AI Challenge — Applied AI/LLM Learning Project | Personal Learning Project

- Completing a self-driven 60-day challenge applying prompt engineering, context engineering, chain-of-thought reasoning, and hands-on AI tool-building using Claude
- Built and documented multiple functional data-driven applications, including dashboards with data visualization, filtering logic, and structured data pipelines
- Practiced translating ambiguous problem prompts into structured, testable outputs — directly relevant to formulating and evaluating AI model behavior
- Documenting all work on GitHub with structured technical write-ups, demonstrating clear technical communication

EDUCATION

B.Tech in Artificial Intelligence & Data Science

University of Kashmir, North Campus | Expected 2029

CERTIFICATIONS

- Python Programming — SkillUp

ACHIEVEMENTS

- Participant, ViCoDathon (Hackathon)
